Mountain Living Together: Co-creating alpine-urban resilience in the Eastern Sierra and beyond
Haley Fitzpatrick
PhD Candidate, Oslo School of Architecture and Design

What can we learn from diverse mountain communities’ journeys in engaging with complex sustainability transformations? How can such examples inspire creative resilience strategies and greater alpine-urban solidarity in the Eastern Sierra? This talk will dive into Haley Fitzpatrick’s ongoing PhD research which compares real-world innovation processes across three mountain communities in different phases of resilience: Hemsedal, Norway; Ostana, Italy and Mammoth Lakes/Bishop, California. This project is supervised by Prof. Dr. Tobias Luthe, Associate Professor at AHO and ETH Zurich, and connected with long-term mountain resilience research with the Mountain Research Initiative’s Resilience Working Group, the MonViso Institute (Italy), Systemic Design Labs (ETH) and Polytechnic University of Turin.

Haley Fitzpatrick is a holistic designer passionate about crafting better relationships with nature. She works across architecture, landscape, systemic design, and sustainability science. She was trained as an architect, working in the United States and recently at Renzo Piano Building Workshop in Genova. Currently, Haley is a PhD student and teacher at The Oslo School of Architecture and Design (AHO) and a Design Associate at the MonViso Institute, a real-world laboratory for sustainability transitions, regenerative design, and new alpine living.
